Game Designer · Developer · Mathematician

I design games, and I build them fast. Former developer at a **Y Combinator** startup building an AI game engine, where I made 10 game templates in four months. MSc in Mathematics with **pass with distinction in every course**, national math competition finalist, and a lifetime of making games. I like hard problems, and I dig until I understand what is really going on.

EXPERIENCE

Summer Engine — *Software Developer*

June 2026 - September 2026 · Y Combinator startup · summerengine.com

An AI-native game engine (a fork of Godot) where agents build games from chat. I worked on the agent side: skills, tools and the harness, and the games they make.

- **Built 10 game templates** in many genres and shipped them to summerengine.com (Next.js, Supabase), and fixed the download pipeline for large releases.
- **Orchestrated frontier coding agents** (Claude Code, Codex, parallel subagents) for audits, fixes and research across the engine, the web app and the games.
- **Wrote and tested skills** for the in-engine agents. Led a five-agent audit of the 24,000-line skills library, and tested it with small, fresh models that build games in the live engine.
- **Improved the 3D auto-rigging pipeline** (Python, Blender): fixed skin-weight bugs and cut mean joint error from 1.6 cm to 0.5 cm.

SELECTED GAMES

Stack-Chess — *Inventor and developer*

2026 · beppep.github.io/stack-chess

A chess variant where moves go on a stack and resolve in reverse order, so you can answer a move before it happens. Designed the rules, then built it with Claude Code: online play with no sign-in, game clocks, replays and a minimax AI opponent.

Grasshopper — *Slay the Spire 2 character mod*

2026 · Steam Workshop · 100+ subscribers

Three new mechanics, six interwoven build-arounds and over 90 cards, balanced so every synergy can take over a run without one combo dominating. C# with Harmony patches on decompiled game code.

Growth Spurt — *Game and level designer*

Nominated for Best Mobile Game, Swedish Game Awards · 4.9 stars on Google Play

Took a game-jam idea with friends all the way to release on Google Play and the App Store. Designed about 60 levels that teach the game one step at a time.

EDUCATION

Lund University — *MSc in Mathematics*

August 2024 - June 2026

Pass with distinction (VG) in every course. Master's thesis: *Nielsen Equivalence Classes of GGS Groups*, supervised by Anitha Thillaisundaram. Research on this continues in 2026.

Lund University — *BSc in Mathematics*

August 2021 - June 2024

Specialized in abstract algebra, with a bachelor's thesis on Auslander–Reiten theory.

Danderyds Gymnasium — *Advanced Mathematics Program*

August 2018 - June 2021

Spetsutbildning i matematik. Nordic Mathematical Contest participant.

AWARDS

Skolornas Matematiktävling
Finalist in the Swedish national math competition.

Swedish Game Awards
Nominated for Best Mobile Game.

Danderyds Gymnasium
Graduation award for particular interest in mathematics.

SKILLS

Game design
Mechanics, systems, balancing, level design, prototyping.

AI agents
Claude Code, Codex, MCP servers, skill authoring, multi-agent orchestration, agent testing.

Programming
Python, GDScript, C#, C++, JavaScript. Familiar with R and Haskell.

Tools
Git and GitHub, Godot, Supabase, Unity, Blender.

Portfolio
Play Stack-Chess
