Bror Persson

bror.beppe.persson@gmail.com

Software Developer, Mathematician, Game Designer

Mathematician and programmer with a background in competition mathematics and many years of building games. I like hard problems, and I dig until I understand what is really going on.

EXPERIENCE

Summer Engine — *Software Developer*

June 2026 - September 2026 · Y Combinator startup · summerengine.com

An AI-native game engine (a fork of Godot) where agents build games from chat. I worked on the agent side: skills, tools and the harness.

- **Orchestrated frontier coding agents** (Claude Code, Codex, parallel subagents) for audits, fixes and research across the engine, the web app and the games.
- **Wrote and tested skills** for the in-engine agents. Led a five-agent audit of the 24,000-line skills library, and tested it with small, fresh models that build games in the live engine through MCP tools.
- **Improved the 3D auto-rigging pipeline** (Python, Blender): fixed skin-weight bugs and cut mean joint error from 1.6 cm to 0.5 cm.
- **Shipped 10 game templates** to summerengine.com (Next.js, Supabase) and fixed the download pipeline for large releases.

EDUCATION

Lund University — *MSc in Mathematics*

August 2024 - June 2026

Master's thesis: *Nielsen Equivalence Classes of GGS Groups*, supervised by Anitha Thillaisundaram. 5.0 GPA. Advanced coursework in abstract algebra, including quiver representations, category theory and random walks on groups.

Lund University — *BSc in Mathematics*

August 2021 - June 2024

Specialized in abstract algebra, with a bachelor's thesis on Auslander–Reiten theory. Also C++, functional programming, probability, inference and differential geometry.

Danderyds Gymnasium — *Advanced Mathematics Program*

August 2018 - June 2021

Spetsutbildning i matematik. Nordic Mathematics Competition participant.

OTHER EXPERIENCE

Research in group theory

2026 - present

Continuing my thesis work on generating pairs of GGS groups (groups acting on rooted trees): Nielsen classes and T_k-systems.

Slay the Spire 2 mods

2026

Custom characters and card mods built on decompiled game code and Harmony patches. Two characters are on the Steam Workshop.

Games and prototypes

10+ fully playable games and 50+ prototypes since childhood, plus many board games. **Growth Spurt**, a mobile puzzle game made with other students, was nominated for Best Mobile Game at the Swedish Game Awards.

SKILLS

Languages
Python, GDScript, C++. Familiar with R and Haskell.

Tools
Git and GitHub, Godot, Supabase, Unity, Ableton Live.

AI agents
Claude Code, Codex, MCP servers, skill authoring, multi-agent orchestration, agent testing.

Other
Driving license.

AWARDS

Skolornas Matematiktävling
Finalist.

Danderyds Gymnasium
Graduation award for particular interest in mathematics.

Swedish Game Awards
Nominated for Best Mobile Game.

CAMPS

Mattekollo (2016, 2018, 2019, 2020), Hack4Sweden (2017), Hello World (twice), a drone programming camp.
